

# ClearCube Blade Manager 4.0

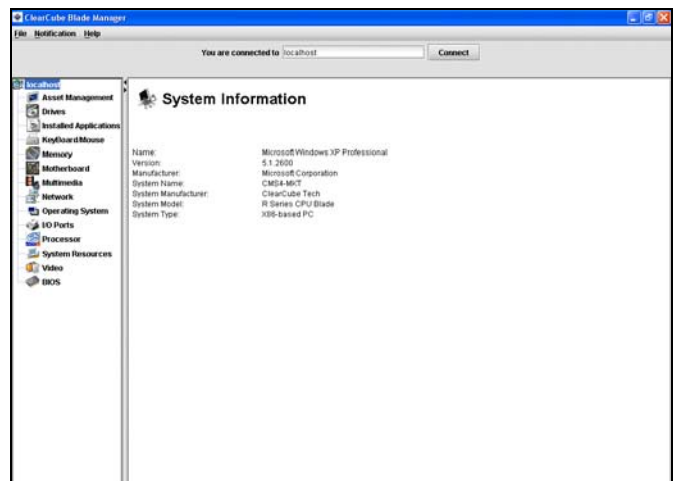

## A Component of the ClearCube Management Suite

Blade Manager gives you the ability to manage assets and monitor the health of the PC Blades in your enterprise on a one-to-one basis. When combined with ClearCube Control Center, Blade Manager can provide remote management and health monitoring for your entire enterprise on a one-to-many basis. In addition, integration with Control Center enables user level alerts based on programmable thresholds giving them instant notification of potential hardware problems.

Blade Manager is compatible with established systems management standards and can readily integrate with any management console vendor that supports XML including LANDesk, Tivoli, Microsoft SMS, Altiris, CA Unicenter and others.

**Installed Applications**

**System Information**

### Key Features

#### Health Monitoring:

- Browse real-time health status on hardware including cooling fan speeds, power supply voltages and processor temperatures

#### Asset Management:

- List hardware inventory with specifications
- List installed applications, BIOS data and OS details

#### Alerting:

- Automatically send email alerts based on programmable thresholds

#### Standards Based:

- DMTF, CIM and WMI compliant
- Integration with console vendors via XML

**System Requirements:** Windows 2000 or XP Professional. Alerting functionality requires ClearCube Control Center software. Blade power supply, CPU temperature and fan speed health monitoring requires ClearCube Switch Manager

**Ordering Information:** Blade Manager 4.0 is available stand-alone or as part of the ClearCube Management Suite.

**Twelve months maintenance and support included with purchase.**
